Project: Population The table shows the populations (in millions) of the United States for selected years from 1790 through 2010.
(Source: U.S. Census Bureau)

| DATA | Year | Population, $P$ |
| :---: | :---: | :---: |
| E | 1790 | 3.929 |
| \% | 1800 | 5.308 |
| ) | 1810 | 7.240 |
| $\frac{\square}{\square}$ | 1820 | 9.638 |
| \% | 1830 | 12.866 |
| 丐 | 1840 | 17.069 |
| 3 | 1850 | 23.192 |
| $\stackrel{\square}{5}$ | 1860 | 31.443 |
| $\stackrel{\text { ¢ }}{ }$ | 1870 | 39.818 |
| $\stackrel{5}{5}$ | 1880 | 50.189 |
| \% | 1890 | 62.980 |
|  | 1900 | 76.212 |
|  | 1910 | 92.228 |
|  | 1920 | 106.022 |
|  | 1930 | 123.203 |
|  | 1940 | 132.165 |
|  | 1950 | 151.326 |
|  | 1960 | 179.323 |
|  | 1970 | 203.302 |
|  | 1980 | 226.542 |
|  | 1990 | 248.718 |
|  | 2000 | 281.425 |
|  | 2010 | 308.746 |

(a) Use a graphing utility to plot the data. Let $t$ represent the year, with $t=0$ corresponding to 1800 .
(b) Use the regression feature of the graphing utility to find a quadratic model for the data.
(c) Use the graphing utility to graph the model from part (b) and the original data in the same viewing window. How well does the model fit the data? Explain your reasoning.
(d) Consider the equation $0.00676 t^{2}+0.0072 t+5.911=330$. Use the discriminant to determine the number of solutions of the equation.
(e) Solve the equation from part (d) algebraically. Interpret the solution(s) in the context of the problem.
(f) Use the internet to find if the present U.S. population is over 330 million. Compare your answer with your answer from part (d).
